## Service Box Extensions

**$\frac{5}{16}$ " hardened, square head, cup point set screws for extra holding power and adjustability**

Our service box extensions are made from Schedule 40 pipe and are used to increase the height of an existing service box or to accommodate greater depth in a new installation. The service box extension is installed by removing the existing cover and sliding the extension over the top of the box pipe. The extension is adjusted to the desired height and the set screw(s) are tightened to lock it in place before replacing the cover. Extensions are made in lengths from 3" to 24".

	LSBE2-24	24	45620 5

\* Service Box Extensions with one set screw are stock; others sizes available by special order.

## Centering Rod Adapter For 2 1/2" Service Box

The 2 1/2" Centering Rod Adapter is self-centering assuring correct alignment of the curb stop, service box rod and curb box wrench in Buffalo Style service boxes.

The Centering Rod Adapter fits all curb stops. The 5/8" shaft is heavier than most service box rods making it strong enough to be used with 2" curb stops.
